

NF CERTIFICATION REFERENCE SYSTEM – Sanitary Appliances

This document intends to clarify the explanations of the NF Committee – Sanitary Appliances regarding the implementation of the given certification reference system.

- Committee of 06/06/2019

Interpretation/Explanation pertaining to the reference system:

- ✓ **§ 2.5.2.1 “NF017”**: Marking certified products. The logo  with the “Certified by CSTB” and “Sanitary Appliances” comments can be replaced by the NF logo alone , thus removing the following comments for technical reasons (logo that is marked by ink stamp or moulded, etc.). Furthermore, some of the product standards require that the standard reference be legibly affixed to the product. Affixing the NF logo applies to the compliance with the standards integrated into the NF017 reference system and the marking of the standard reference is thus not compulsory.
- ✓ **§ 1.1 “Doc017-14”**: If the cistern is fitted with a connection hose, the latter shall be covered by a favourable Technical Appraisal and a QB or NF mark shall appear on it.
- ✓ **“Doc017-12”**: As regards extended wall-hung WC pans, the dimension between the wall and the geometrical centre of the pan’s bowl shall be equal to 500 mm ± 10 mm.

Note: This document is to be deleted as soon as a revised version of the reference system is issued.
