Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and should be identified as such. Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may be made, with the written consent of the issuing Technical Assessment Body. Any partial reproduction has to be identified as such.

Specific Part

Technical description of the product

The Hilti heavy duty anchor HSL4 in the range of M16 and M20 in concrete is a torque-controlled expansion anchor made of galvanised steel, consists of a threaded rod version HSL4-G (with cone, expansion sleeve, collapsible element, distance sleeve, hexagon nut and threaded rod), a Hilti filling set (with filling washer, spherical washer and lock nut) and an injection mortar (Hilti HIT-HY 200-A or Hilti HIT-HY 200-R).

It is placed into a drilled hole and anchored by torque-controlled expansion.

The illustration and the description of the product are given in Annexes A.

Specification of the intended use

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annexes B.

The provisions made in this European technical assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

Performance of the product

1.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic fatigue resistance under fatigue cyclic tension loading (Assessment method B)	See Annex C1 to C2
Characteristic fatigue resistance under fatigue cyclic shear loading (Assessment method B)	
Characteristic fatigue resistance under fatigue cyclic combined tension and shear loading (Assessment method B)	
Load transfer factor for cyclic tension and shear loading	
Load transfer factor	See Annex C1 to C2
Durability	See Annex B1

Assessment and verification of constancy of performance (AVCP)

According to the Decision 96/582/EC of the European Commission¹, as amended, the system of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) given in the following table apply.

Product	Intended use	Level or Class	System
Metal anchors for use in concrete	For fixing and/or supporting to concrete, structural elements (which contributes to the stability of the works) or heavy units	—	1

¹ Official Journal of the European Communities L 254 of 08.10.1996

Technical details necessary for the implementation of the AVCP system

Technical details necessary for the implementation of the Assessment and verification of constancy of performance (AVCP) system are laid down in the control plan deposited at Centre Scientifique et Technique du Bâtiment.

The manufacturer shall, on the basis of a contract, involve a notified body approved in the field of anchors for issuing the certificate of conformity CE based on the control plan.

Designation	Material
HSL4-G	
Cone	Carbon steel, electroplated zinc coated $\geq 5\mu\text{m}$
Expansion sleeve	Carbon steel, electroplated zinc coated $\geq 5\mu\text{m}$
Collapsible element	Plastic element
Distance sleeve	Carbon steel, electroplated zinc coated $\geq 5\mu\text{m}$
Hexagon nut	Carbon steel, electroplated zinc coated $\geq 5\mu\text{m}$
Threaded rod	Carbon steel, electroplated zinc coated $\geq 5\mu\text{m}$, rupture elongation $\geq 12\%$
Hilti filling set	
Filling washer	Carbon steel, electroplated zinc coated $\geq 5\mu\text{m}$
Spherical washer	Carbon steel, electroplated zinc coated $\geq 5\mu\text{m}$
Lock nut	Carbon steel, electroplated zinc coated $\geq 5\mu\text{m}$

Hilti heavy duty anchor HSL4

Product description
 Materials

Annex A4

Specifications of intended use

Anchorage subject to:

- Fatigue cyclic loading.

Note: static and quasi-static loading according to ETA-19/0556.

Base material:

- Reinforced or unreinforced normal weight concrete according to EN 206:2013 + A1:2016.
- Strength classes C20/25 to C50/60 according to EN 206:2013 + A1:2016.
- Cracked and uncracked concrete.

Use conditions (environmental conditions):

- Structures subject to dry internal conditions.

Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorages under fatigue cyclic loading are designed in accordance with: EN 1992-4:2018.

Installation:

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- The anchor may only be set once.
- Drilling technique: hammer drilling.
- Cleaning the hole of drilling dust.
- In case of aborted hole, drilling of new hole at a minimum distance of twice the depth of the aborted hole, or smaller distance provided the aborted drill hole is filled with high strength mortar and no shear or oblique tension loads in the direction of aborted hole.
