## 1 Technical description of the product

The Fikstek Vesta PRO-ONE adhesive system is a chemical anchor system (capsule type) consisting of glass capsule Vesta PRO-ONE with a threaded rod with hexagon nut and washer of sizes M8, M10, M12, M14, M16, M20, M22, M24 and M30.

The standard threaded rod can be made of zinc plated carbon steel, stainless steel or high corrosion resistant stainless steel.

The glass capsule is placed into a rotary/percussion previously drilled hole and the threaded rod is driven by machine with simultaneous hammering and turning.

The anchor rod is anchored via the bond between anchor rod, chemical mortar and concrete.

The illustration and the description of the product are given in Annex A1.

## 2 Specification of the intended use

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annexes B.

The provisions made in this European Technical Assessment are based on an assumed working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

## 3 Performance of the product

### 3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic tension resistance and shear resistance for threaded rods acc. TR029	See Annex C1, C2
Characteristic tension resistance and shear resistance for threaded rods acc. CEN/TS 1992-4-5	See Annex C3, C4
Displacements	See Annex C1, C2

### 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorage satisfy requirements for Class A1
Resistance to fire	No performance determined (NPD)

### 3.3 Hygiene, health and the environment (BWR 3)

Regarding dangerous substances contained in this European Technical Assessment, there may be requirements applicable to the products falling within its scope (e.g. transposed European legislation and national laws, regulations and administrative provisions). In order to meet the provisions of the Construction Products Regulation, these requirements need also to be complied with, when and where they apply.

### 3.4 Safety in use (BWR 4)

For Basic Requirement Safety in Use the same criteria are valid as for Basic Requirement Mechanical Resistance and Stability.

### 3.5 Protection against noise (BWR 5)

Not relevant.

**3.6 Energy economy and heat retention (BWR 6)**

Not relevant.

**3.7 Sustainable use of natural resources (BWR 7)**

For the sustainable use of natural resources no performance was determined for this product.

**3.8 General aspects relating to fitness for use**

Durability and Serviceability are only ensured if the specifications of intended use according to Annex B1 are kept.

**4 Assessment and Verification of Constancy of Performance (AVCP)**

According to the Decision 96/582/EC of the European Commission<sup>1</sup>, as amended, the system of assessment and verification of constancy of performance (see Annex V to Regulation (EU) No 305/2011) given in the following table apply.

Product	Intended use	Level or class	System
Metal anchors for use in concrete	For fixing and/or supporting to concrete, structural elements (which contributes to the stability of the works) or heavy units	—	1

**5 Technical details necessary for the implementation of the AVCP system**

Technical details necessary for the implementation of the Assessment and verification of constancy of performance (AVCP) system are laid down in the control plan deposited at Centre Scientifique et Technique du Bâtiment.

The manufacturer shall, on the basis of a contract, involve a notified body approved in the field of anchors for issuing the certificate of conformity CE based on the control plan.

Issued in Marne La Vallée on 15-06-2015 by  
Charles Baloché  
Directeur technique

## Specifications of intended use

**Table B1: Overview use categories and performance categories**

Use conditions	Mortar capsule Vesta PRO-ONE with ...
	<b>Threaded rods</b> 
hammer drilling or compressed air drilling mode. 	✓
Static and quasi static loading, in non-cracked concrete	M8 to M30 Tables C1, C2, C3, C4, C5, C6
Use category: dry or wet concrete (flooded holes are excluded)	✓
Installation temperature (minimum)	mortar +5°C, concrete -5°C
In-service temperature	<div> <div>Temperature range I:</div> <div>-40°C to +40°C</div> </div> <div> <div>Temperature range II:</div> <div>-40°C to +80°C</div> </div> <div> <div>(max long term temperature +24°C and max short term temperature +40°C)</div> <div>(max long term temperature +50°C and max short term temperature +80°C)</div> </div>

### Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206-1:2000-12.
- Strength classes C20/25 to C50/60 according to EN 206-1:2000-12.
- Maximum chloride concrete of 0,40% (CL 0.40) related to the cement content according to EN 206-1:2000-12.

### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions  
(zinc coated steel, stainless steel or high corrosion resistant steel).
- Structures subject to permanently damp internal condition :
  - if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel).
  - with particular aggressive conditions (high corrosion resistant steel).
- Structures subject to external atmospheric exposure including industrial and marine environment :
  - if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel).
  - with particular aggressive conditions (high corrosion resistant steel).

*Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).*

- Overhead installations are permitted

### Design:

- Anchorage are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the forces to be transmitted. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Anchorage under static or quasi-static actions are designed in accordance with (please choose the relevant design method): EOTA Technical Report TR 029, Edition September 2010; CEN/TS 1992-4-5

Characteristic resistance property class 5.8		$V_{Rk,S}$ [kN]	9	14	21	29	39	61	76	88	140				
Characteristic resistance property class 70		$V_{Rk,S}$ [kN]	13	20	30	40	55	86	106	124	196				
Characteristic resistance property class 8.8 property class 80		$V_{Rk,S}$ [kN]	15	23	34	46	63	98	121	141	224				
Partial safety factor property class 5.8, 8.8 property class 70 property class 80		$\gamma_{Ms}^{1)}$ [-]	1.25 1.56 1.33												
Ductility factor acc. CEN/TS 1992-4-5, § 6.3.2.1		$k_2$ [-]	0.8												
Steel failure with lever arm															
Char. bending moment property class 5.8		$M^0_{Rk,s}$ [Nm]	19	37	66	105	166	325	448	561	1125				
Char. bending moment property class 70		$M^0_{Rk,s}$ [Nm]	26	52	92	146	233	454	627	786	1574				
Char. bending moment property class 8.8 property class 80		$M^0_{Rk,s}$ [Nm]	30	60	105	168	266	519	716	898	1799				
Partial safety factor property class 5.8, 8.8 property class 70 property class 80		$\gamma_{Ms}^{1)}$ [-]	1.25 1.56 1.33												
Concrete pryout failure															
Factor in equation (27) of CEN/TS 1992-4-5, § 6.3.3		$k_3$ [-]	2.0												
Partial safety factor		$\gamma_{Mc}^{1)}$ [-]	1.5 <sup>2)</sup>												
Concrete edge failure <sup>3)</sup>															
Concrete Edge failure, see CEN/TS 1992-4-5, § 6.3.4															
Partial safety factor		$\gamma_{Mc}^{1)}$ [-]	1.5 <sup>2)</sup>												

<sup>1)</sup> In absence of other national regulations / <sup>2)</sup> The partial safety factor  $\gamma_2 = 1.0$  is included

<sup>3)</sup> Concrete edge failure see chapter 5.2.3.4 of Technical Report TR 029
